Amtsgericht Stuttgart, HRB 360121

URACA GmbH & Co. KG, as a manufacturer of high-pressure plunger pumps and high-pressure cleaning systems, is a downstream user within the meaning of the REACH Regulation. Our products are therefore considered as articles and not substances, and therefore not subject for requirement to registration.

SVHC - List of candidates

We take the obligation to pass on the information about substances in our products according to Article 33 of Regulation 1907/2006/EC (REACH) very seriously.
According to information from our suppliers and our own research, our products currently contain the following substances that are included in the SVHC – List of candidates.

Name of the substance: Lead
EC number: 231-100-4
CAS Number: 7439-92-1
Ingestion date: 27th June 2018
Reason for intake: Toxic to reproduction

Almost all our products contain components with a lead content of > 0.1%. As an alloying element, lead is contained e.g. in parts made of brass, copper, aluminium and also in various types of steel. As an alloying component, lead is firmly bounded and thus no exposure is to be expected. For this reason, no further information on safe use is necessary if the product is used as intended.

If you have any further questions about the implementation of the REACH-Directive in our company, please do not hesitate to contact us.
