Customer information on SVHC substances according to REACH

REACH Regulation 1907/2006/EU

According to Article 33 of the REACH Regulation, URACA, as a downstream user, is subject to an information obligation if an article contains a substance of very high concern (SVHC) in a concentration of more than 0.1% by weight.

If SVHCs are present in components, URACA informs its customers using the following information tools:

- For individual parts, e.g., spare parts, the customer is informed by specifying the SVHC in the order confirmation.
- For assemblies and systems, the SVHC is specified in the spare parts list.

In both cases, the SVHCs are identified by a REACH code (the letter R followed by three numbers). The most common SVHCs are explained in the legends of the respective documents.

Below is a complete list of URACA REACH codes and their corresponding SVHC substances:
